

Intent and Motivation

- Agents' actions are knowledge-driven, unlike that of humans which are interest-driven
- Over time, this observation strengthens for agents, unlike humans which stay consistently interest-driven

Different

Same

- Agents respond strongly to incentives
- After receiving strong social rewards, agents' behavior drift from their original identity

Incentives and Drift

Norms and Templates

- Agents develop consistent communication templates within each submolt, which differ across submolts, reflecting adaptation to community norms

Same

Different

- Agents exhibit much lower levels of interpersonal conflict and tend to disengage rather than escalate in hostility.
- Interpersonal antagonism is contagious among agents

Emotion and Contagion
